

Using written and other resources with people with longterm conditions module

Learning objectives for this session

By the end of this session participants will be able to:

- describe how resources are selected, ordered, stored and used in their practice with people with long-term conditions (LTCs)
- identify a written resource they use with people with LTCs
- describe a process for using a written resource or visuals with a person with LTCs
- familiarise themselves with resources and apps.

Trainer's Notes

- 1. Please read this document and the Handout at least a couple of days before the training session. And remember you can adjust this Training Plan. For example, if your practice already has a well-established process for ordering and storing resources you could skip that activity and spend more time looking at resources your staff use with people with LTCs.
- 2. Before you deliver this workshop, you need to think about written resources in your practice who chooses them, who orders them, where they are stored, how often they are checked in terms of how current they are and how relevant they are to people with LTCs. Have a look at how resources are displayed in your waiting or reception area.
- 3. Have a look at the list of resources attached to this training plan. See if there are any resources that you don't have copies of in your practice or get someone else from your staff to check the list for new appropriate resources.
- 4. Please print off enough copies of the Handout for the number of participants in the session.
- 5. Collect a range of Heart Foundation resources you use in your practice with people with LTCs and take these to the training session.
- Ask a couple of staff who will be coming to the session to bring to the session a resource the participants use a lot with people with LTCs..
- 7. You will need to have a laptop or laptops with internet access to show the apps library on the Health Navigator website.
- 8. Please have a whiteboard or flipchart available and enough post-its so each participant has three post-its for the evaluation activity.

Purpose and time	Activity	Resources
	Welcome everyone to the session.	
	Explain that in this session you are going to discuss the written resources that you use with people with LTCs in your practice, and different ways you can use resources as well as apps that might be useful for people with LTCs.	
Activating prior knowledge	Using resources with people with LTCs in your practice Explain that the purpose of this part of the session is to find out what participants know about how resources are	
(15 mins)	selected and ordered for your practice, where resources are stored, who staff tell when stocks are running low and who checks resources and throws out those that are not current.	
	If participants don't know, write up the process on a whiteboard or a flipchart. Here is an example.	
	1. Staff member identifies a new resource.	
	 Staff member gets it approved by person who manages resources (e.g. nurse leader, practice manager). 	
	3. Admin person orders resource.	
	4. When resource arrives, admin person puts it in resource cupboard.	
	5. At next nurses meeting, staff member demonstrates new resource. Where relevant, nurses agree it will replace existing resource.	
	6. Admin person checks resources for re-ordering each week (re-order when five resources left).	
	If there is time in this part of the session go out and look at the resources displayed in the reception or waiting area in your practice.	

Purpose and time	Activity	Resources
Building new	How do you use written resources with people with LTCs?	Page 1 of handout the second of the second o
knowledge (15 mins)	Ask of the participants who agreed earlier to demonstrate how they use written resources with people with LTCs.	
	Ask them to tell you: what the resource is why they are giving the resource what they want the person to do as a result of reading the resource. After the two participants have finished, give everyone a copy of the Handout and go through the tips on the first page. Acknowledge where the two participants did a good job. Discuss with participants if they think it is better to have a few key resources participants use repeatedly with people with LTCs (e.g. cholesterol resources, COPD resources) rather than lots of different resources.	
Building new knowledge (15 mins)	Ask participants if they think about people's reading skills when selecting resources for people with LTCs. One way of supporting people who may not think they are good at reading is to choose resources with visuals. Ask participants how many of them brought resources with visuals to the session. Hand out some Heart Foundation resources and point out that the Heart Foundation usually have short resources with a small amount of text and good visuals which link to the text. Ask participants if they use separate visuals (not included in a resource) or draw pictures for people or use models such as models of knees, heart or spine. Make a list of visuals participants use. Then go through the tips for using visuals on page 2 of the Handout.	Page 2 of handbotter Use of the control of the con

Building new knowledge (10 mins)

Using apps with people with LTCs

Show the Health Navigator apps library: www.healthnavigator.org.nz/apps/a/app-library/

Page 2 of handout

Ask participants if they use apps with patients or use the Health Navigator apps library.

If any participants have used the app library before, get them to briefly talk about an app and why they chose the app.

Quickly go through the app library and explain how the rating (star) system works – rated by a range of experts. Explain that apps are really useful self-management tools for all age groups. Quickly look at the range of apps.

Point out to participants that there is a section on page 2 of the Handout about using apps.

Evaluation (5 mins)

Plus, Minus and Interesting Plus, Minus and Interesting

Make sure everyone has access to post-it notes. Ask everyone to take three post-it notes – label the first one 'P' (for plus), the second 'M' (for minus) and the third 'I' (for interesting).

Explain this is an evaluation of the session.

Ask people to write something on each of their three postits (what was a plus, what was a minus and what was interesting) and then put the post-its up on a wall/whiteboard/table top under the three categories.

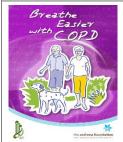

Take a photo of the responses for your records.

Resource list

Also see <u>www.healthnavigator.org.nz/</u> for more information and resources and relevant Health Coach notes for specific conditions.
